## Is your exported raw data formatted incorrectly?

This can happen if you have auto-formatting turned on in Excel. This feature will try to do you a favor by recognizing data and applying an applicable format. For example, any numeric compatible with a MM-DD or MM-DD-YYYY format will show as a date. If Excel has made some assumptions that do not apply to your data you can fix this up easily!

## Manually Adjusting Incorrect Formatting for a Column

In Excel, right click the column and select **Format Cells**.

	A1	\$	8 🛇	( fx	12/15/2
		Cut		ЖΧ	D
2		Сору		ЖC	
3		Paste		жv	
4 5		Paste Spe	cial	^%V	_
6		Insert			
7		Delete			
<u> </u>		Clear Con	tents		
10		_			
11		Format Ce	ells	<b>#1</b>	
12		Column W	/idth		
13		Hide			
14		Unhide			
15		Unnue			
16					

Then select the correct formatting that you wish to apply.

	Format Cells
Nu	mber Alignment Font Border Fill Protection
Category:	Sample
General Number Currency Accounting Date Time Percentage Fraction Scientific Text Special Custom	General format cells have no specific number format.

## Turn Off the Auto-Formatting Feature

If you wish to turn off the auto-formatting feature altogether in Excel follow the below instructions and then retry opening your data:
