

Features for Our International Customers

Below, find a list of features and services customized or built specifically for our international customers.

24/7 Support

Email support is available 24/7.

EU Data Center

As of August 5, 2015, we have an EU data center! When creating a SurveyGizmo trial, select **EU** via the **Data Center** dropdown menu.

Accounts hosted in the EU Data Center will generate **www.surveygizmo.eu** survey share links and **i.sgizmo.eu** email campaign links. In addition, all data collected via EU accounts will be stored at our data center in Frankfurt, Germany!

Canadian Data Center

As of February 8, 2017, SurveyGizmo offers access to a Canadian data center! When creating a SurveyGizmo trial, select **CA** via the **Data Center** dropdown menu.

Accounts hosted in the CA Date Center will generate **ca.surveygizmo.com** survey share links and **i.sgizmoca.com** email campaign links. In addition, all data collected via Canadian accounts will be stored at our data center in Montreal, Canada!

Have additional concerns about security and privacy?

Download our Security Whitepaper here:

Log In to Accounts in Different Data Centers

Visit <https://app.surveygizmo.com/login/v1> to log in to any and all of your SurveyGizmo accounts. If you have multiple accounts with the same email address in different data centers, SurveyGizmo will ask you to [choose the account that you want to log in to](#).

If you have one account, you will be logged in to that account and the associated data center.

Set Up EU or Canada Private Domain for Your Share Links

Private domains allow you to fully brand your survey links removing any reference to SurveyGizmo. A private domain is set up jointly by your IT department and SurveyGizmo. Your IT department creates a subdomain and points it to SurveyGizmo. For example, in this link — **surveys.acmecocom** — "surveys" is a subdomain of acmecocom.

You can also set up a branded subdomain, e.g. [acmecocom.surveygizmo.com/s3/](#). To learn more check out our [Share Link Branding and Customization tutorial](#).

1. Decide what you want your subdomain to be. If your website is **www.abccompany.com** then you might decide on **surveys.abccompany.com**.
 2. Tell your IT department to create a **CNAME DNS record** for the subdomain of your choice and have them point it to **www.surveygizmo.eu** for EU accounts or **privatedomain.sgizmoca.com** for Canada Accounts.
 3. Click on your **Account > Integrations > Domains**.
 4. Click **New Domain** and select the option to **Create Private Domain**. Click **Next**.
 5. Enter the private domain that has been set up by your IT department in the **Private Domain** field.

Set Up a Link to Your Survey Using Your EU or Canada Private Domain

Once you have your [private domain set up](#) you'll want to use it in your survey share links. To do so:

1. Go to the **Share** tab of a project.
2. Click **Customize this link** and select **Private Domain** under **Sub-Type** and select your private domain in the dropdown portion of the link that is provided then click **Done** and **Save Link**.
3. Test the link! Once you've created a link that uses your private domain, test it! The link will not work if it is not set up properly.

Private Domain

Done

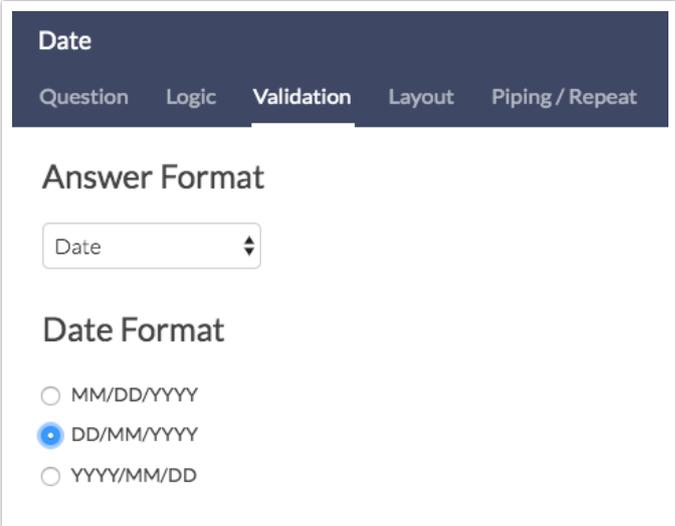

Note: the /s3/ portion of our survey links cannot be removed; this is the identifier that tells our infrastructure to look for a survey.

If the link doesn't work immediately, please be patient. When changing CNAME records, there is a value called TTL (time to live), which dictates how long information like a CNAME could be cached before being refreshed. A TTL of 86400 (seconds) would mean that, if a DNS record was changed on the primary nameserver, DNS servers around the world could still be showing the link from their cache for up to 24 hours after the change.

Change Date Validation to DD/MM/YYYY or YYYY/MM/DD

By default, the **Date** question will validate entries to ensure the MM/DD/YYYY format. You can change this to DD/MM/YYYY if you wish.

1. To do so, go to the **Validation** tab of your Date question.
2. Select **DD/MM/YYYY** under **Date Format** and click **Save Question**.

The screenshot shows the configuration interface for a 'Date' question. At the top, there are tabs for 'Question', 'Logic', 'Validation', 'Layout', and 'Piping / Repeat'. The 'Validation' tab is selected. Below the tabs, there is a section for 'Answer Format' with a dropdown menu currently set to 'Date'. Underneath, there is a 'Date Format' section with three radio button options: 'MM/DD/YYYY', 'DD/MM/YYYY' (which is selected), and 'YYYY/MM/DD'.

Now, whether your respondents choose to use the date picker calendar or key their

answer, it will be validated in the format you want.

Add a survey with this question to your **US account**!

Add a survey with this question to your **EU account**!

International Contact Forms

The [Contact Form](#) question type is designed to collect address in an American format. This can, of course, be customized as needed. Below we created contact forms to collect [Canadian](#), [UK](#), [EU](#), and [Australian](#) addresses that you can download to your SurveyGizmo account.

1. Please enter your contact info:

First Name

Last Name

Title

Company Name

Street Address

Apt/Suite/Office

City

State

Zip

Country

Canadian Contact Form

Other Useful RegEx Resources

- Test your regular expressions: [RegEx Tester](#)
- A RegEx library to search other commonly used patterns: [RegExLib](#)
- Reg Ex Cheat Sheet: [Cheat Sheet](#)

Setting Up RegEx

To setup a RegEx pattern on a specific question, select **Edit > Validation** and click the **Answer Format** dropdown menu. Choose **Regex**.

Now you will see a field for **Regex Validation**. This is where you can select the RegEx pattern that you wish to implement or write your own. You can also specify a message to display if the respondent's input does not match the given pattern.

The screenshot shows the 'Answer Format' configuration interface. It includes a dropdown menu set to 'RegEx', a 'RegEx Validation' text input field containing the pattern '^([1-8])?s?([1-9]|1[01])', a 'Common RegEx Patterns' dropdown menu with the selected option 'Height in Feet and Inches e.g. 6'3" or 6' 3"', and a 'Message to display when answer does not pass RegEx' text area containing the message 'Sorry about that, we need your height in feet AND inches (6'1" or 5'5")!'.

Survey Language Translations

By default, your account's default language will be set to English but you can easily change this.

1. To change the default language at the account level (and all newly created projects) go to **Account > Summary > Account Defaults**.
2. Select the language for which you most commonly create surveys in the **Default Project Language** dropdown. To learn more visit our [Change Default Survey](#)

[Language Tutorial.](#)

You may want to offer multiple language translations of your survey. Our translation tool has 200 languages available for translating your survey. Check out our tutorial on [Translating Your Survey Into Different Languages](#) to learn more!

Right-to-Left Languages

Arabic, Hebrew, Persian, and Urdu are each set up as right-to-left languages in SurveyGizmo. This means that when a survey respondent responds to one of these language translations all texts and inputs will be aligned to the right!
