

# Question Numbering Customizations

SurveyGizmo surveys are designed to dynamically number survey questions. This means that for each survey respondent the questions are numbered sequentially regardless of logic. In most cases, this will meet your needs but there are a couple of scenarios where you might want to change the default question numbering in a survey.

## Turn Off Question Numbering

To turn off question numbers altogether in your live survey go to **Style > Text > Text Options** and uncheck the option to **Show Question Numbers**.

# Turn Off Dynamic Question Numbering

If you wish to turn off dynamic numbering you can do so under **Tools > Survey Settings**.

The image shows a 'General Settings' form with the following fields:

- Title: Dynamic Numbering Off
- Internal Title: (empty)
- Description: (empty text area)
- Category: (empty)
- Project Date Format: MM/DD/YYYY
- Project Currency: \$ - Dollar
- Team Ownership: Documentation x Enter team name
- Dynamic Numbering:  Renumber questions as they are shown / hidden. (This row is highlighted with an orange border)
- Template:  Make this a template.

What this will mean for your survey respondents is that any questions that have show logic will not have a question number. See short demo of how each of these options works below.

# *Dynamic Numbering Off*

1. Do you have pets?

Yes

No

2. Do you plan to get a pet in the future?

Yes

No

Not sure

## *Dynamic Numbering On*

1. Do you have pets?

Yes

No

2. Do you plan to get a pet in the future?

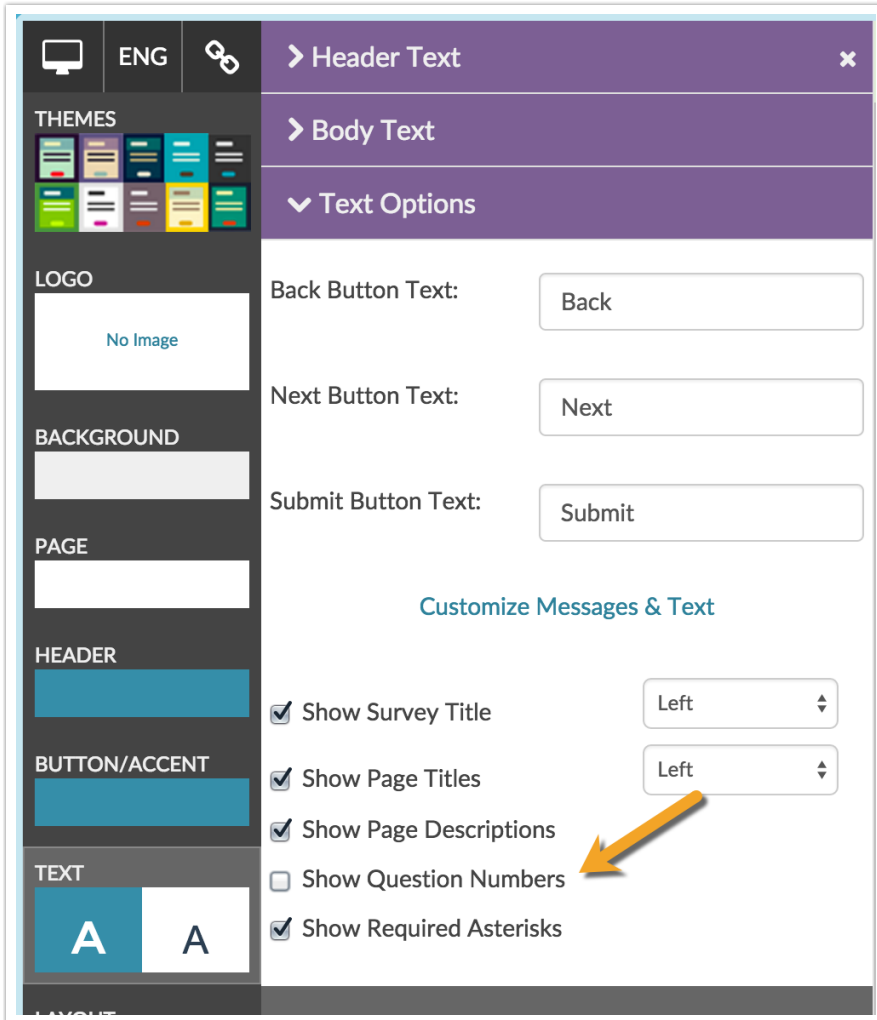

Yes

No

Not sure

## Numbering Sub-Questions

Survey builders often wish to indicate some type of sub-question numbering to group related or like questions together e.g. 1a, 1b, 1c or 1.1 or 1.2 or 1.3. To achieve this go to **Style > Text > Text > Options** and uncheck the option to **Show Question Numbers**.

Once the default question numbers are turned off, you can return to the Build tab\* of your survey and manually add the question numbering you desire. You will need to edit each question and add the question number to the beginning of each question title.

\*The Build tab will always show question numbers regardless of whether question numbering is turned off in the Style tab. To double check your number is turned off, take a quick peek at Preview, Style or the live survey link!

What question do you want to ask?

1a. What is your first name?

[Add Additional Instructions \(Rich Text\)](#)

## Skip Question Numbering on a Question-by-Question Basis

To turn off question numbering on a question-by-question basis edit the question and go to the **Layout** tab. Under **Question Numbering** select the option to **Skip numbering for this question**.

Question Numbering

Skip numbering for this question

## Restart Question Numbering on Each Page

Many survey builders are looking for the ability to restart the question numbering on each page of the survey. There are a couple ways to achieve this!

On the **Style** tab you can turn off question numbering. Go to **Text > Text Options** and uncheck **Show Question Numbers**. Then simply manually add your question numbering to your question titles.

Is this process too manual for you? With this quick little script placed at the top of each page you can automate this!

To set it up, click **Add New Action** and select **Custom Script** action. Give your script a name for your reference and paste the below script and click **Save Action**.

```
setpagestartingnumber(1)
```

You'll want to make sure this action is at the top of each page of your survey; use the reorder tool on the far right (the plus arrows) of the script after you save the action to move each action to the top of the page.

This will restart the question numbering on the page to start with 1. This will only work on a live survey link it will not change the question numbers of your survey on the Build tab.

If you would like to start with a different question number simply change the 1 to the question number you wish to start with! Et voila!

The screenshot shows the SurveyGizmo editor interface for "Page 2: Page Two". At the top right, there are icons for "Preview", edit, add, and delete. Below the header, a "Custom Script Action" is displayed with the text "Restart Question Number Script" and "Custom script exists". To the right of the script action are icons for edit, add, copy, and delete. Below the script action is a Likert scale question: "4. Based on your current level of happiness with SurveyGizmo, how likely are you to recommend SurveyGizmo to a friend or colleague?". The scale ranges from 0 to 10, with "Not at all likely" on the left and "Extremely likely" on the right. At the bottom of the editor, there is an "INSERT:" menu with options for "Question", "Text / Media", "Action", "Question Library", and "Page Break".
