

Set Up Grid Row Logic

SurveyGizmo logic features allow you to customize your survey for each respondent. Doing so will save your respondents from survey fatigue and improve your data quality, since respondents will be more likely to answer only questions that are relevant to them.

Logic can be applied to [stand-alone questions](#), rows within grid questions, [answer options](#), entire survey [pages](#), and actions (Send Email, Quiz Score, etc).

In this tutorial, we will cover how to set up *grid row logic*.

Compatible Grid Questions

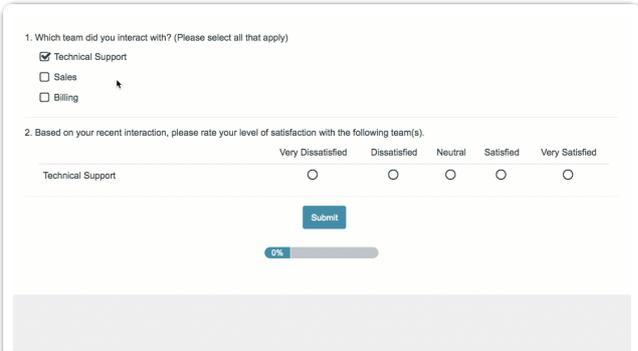

Rows of the following grid questions can be shown/hidden based on answers to previous survey questions (or other conditions):

- [Radio Button Grid](#)
- [Checkbox Grid](#)
- [Dropdown Menu Grid](#)
- [Textbox Grid](#)
- [Star Rating Grid](#)
- [Semantic Differential](#)

Setup Instructions

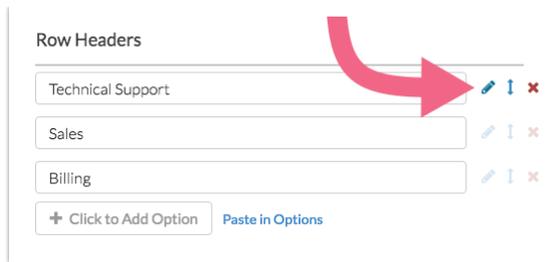

To conditionally display rows of your grid questions follow these steps:

- 1.** Set up your grid question columns and rows. Edit the row or rows you wish to conditionally display by clicking the pencil icon.

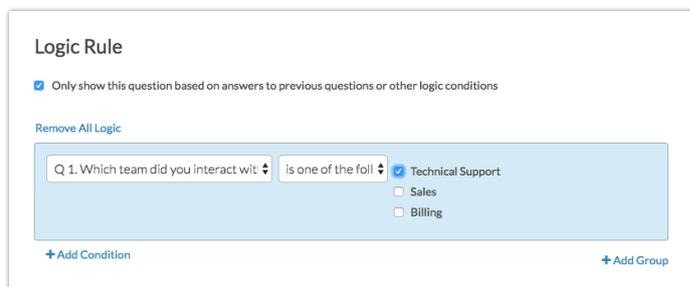

The screenshot shows a survey question with two parts. Part 1 is a checkbox grid: "1. Which team did you interact with? (Please select all that apply)". It has three rows: "Technical Support" (checked), "Sales", and "Billing". Part 2 is a star rating grid: "2. Based on your recent interaction, please rate your level of satisfaction with the following team(s)". It has five columns: "Very Dissatisfied", "Dissatisfied", "Neutral", "Satisfied", and "Very Satisfied". The "Technical Support" row has five radio buttons, all of which are currently unselected. Below the grid is a "Submit" button and a progress bar showing "0%".

Check it out in an [example survey](#) !
[Add a survey](#) with this question to your account!

2. Go to the **Logic** tab and click the option under **Logic Rule** to **Only show this question based on answers to previous questions or other logic conditions.**
3. Using the logic builder, set up the logic condition(s).

4. When your logic conditions are complete click **Done** and **Save Question.**

Notes and Limitations

- Logic conditions cannot be applied to grid columns.
- When using negative logic conditions such as **is not answered**, **is not one of the following** or **is not exactly equal to**, the target and trigger questions must be on *separate pages* in order for those logic conditions to be available. Negative logic can be very tricky; check out our [Understanding Negative Logic Tutorial](#) to learn more!
- SurveyGizmo logic is based on the [reporting values](#) that are assigned to your answer options. If you have identical reporting values for any two or more answer options and are basing logic on one of those, the logic condition will not be able to differentiate between the answer options.
- Question Logic should not be used in conjunction with the [Hide this question by default](#) option.
